

Write a C program to perform below actions in an array element with length of 10.

1. How many even Numbers in the array
2. sort the array in ascending order
3. sort the array in descending order
4. remove repetition numbers and print the array

Step 1 . Created the directory structure using following command

```
mkdir src exec inc && touch src/main.c inc/main.h
```

Step 2. code inside `main.h`

```
#define LENGTH 10
```

```
// display the array
```

```
void printArray(int arr[],int length){  
    for(int i=0;i<length;i++){  
        printf("%d ",arr[i]);  
    }  
}
```

```
// Function to count even numbers in the array
```

```
int countEvenNumbers(int arr[], int length) {  
    int evenCount = 0;  
    for (int i = 0; i < length; i++) {  
        if (arr[i] % 2 == 0) {  
            evenCount++;  
        }  
    }  
}
```

```
return evenCount;
```

```
}
```

```
// Function to sort the array in ascending order
```

```
void sortAscending(int arr[], int length) {
```

```
    int temp;
```

```
    for (int i = 0; i < length - 1; i++) {
```

```
        for (int j = i + 1; j < length; j++) {
```

```
            if (arr[i] > arr[j]) {
```

```
                temp = arr[i];
```

```
                arr[i] = arr[j];
```

```
                arr[j] = temp;
```

```
            }
```

```
        }
```

```
    }
```

```
}
```

```
// Function to sort the array in descending order
```

```
void sortDescending(int arr[], int length) {
```

```
    int temp;
```

```
    for (int i = 0; i < length - 1; i++) {
```

```
        for (int j = i + 1; j < length; j++) {
```

```
            if (arr[i] < arr[j]) {
```

```
                temp = arr[i];
```

```
                arr[i] = arr[j];
```

```
                arr[j] = temp;
```

```
            }
```

```
        }
```

```
    }
```

```
}
```

```
// Function to remove duplicates from the array and print the  
unique array
```

```
void removeDuplicates(int arr[], int *length) {
```

```

int ARR_LEN=*length;
// Sort in ascending order
sortAscending(arr, ARR_LEN);

// remove duplicate element in array
int j=0;
for (int i = 1; i < ARR_LEN; i++) {
    if (arr[i] != arr[j]) {
        arr[++j] = arr[i];
    }
}

// update the length of array
*length=j+1;
}

```

Step 3. code inside `main.c`

```

#include <stdio.h>
#include "main.h"

int main() {
    int arr[LENGTH];
    // Input array elements
    printf("Enter %d elements of the array:", LENGTH);
    for (int i = 0; i < LENGTH; i++) {
        scanf("%d", &arr[i]);
    }

    //1. Count even numbers
    int evenCount=countEvenNumbers(arr, LENGTH);
}

```

```

printf("Total even numbers in array : %d\n",evenCount);

// 2. Sort the array in ascending order
sortAscending(arr, LENGTH);
printf("Array sorted in ascending order: [ ");
printArray(arr,LENGTH);
printf("]\n");

// 3. Sort the array in descending order
sortDescending(arr, LENGTH);
printf("Array sorted in descending order: [ ");
printArray(arr,LENGTH);
printf("]\n");

// 4. Remove duplicates and print the unique array
int newLength=LENGTH;
removeDuplicates(arr, &newLength);
printf("After removing duplicate numbers : [ ");
printArray(arr,newLength);
printf("]\n");

return 0;
}

```

Step 4 . Compiling

```
gcc -Wall -iquote inc -o exec/program src/main.c
```

Step 5. Running the program

`./exec/program`

Output

```
learn/c/program_5
●  ./exec/program
Enter 10 elements of the array:1 6 9 3 7 7 9 3 5 6
Total even numbers in array : 2
Array sorted in ascending order: [ 1 3 3 5 6 6 7 7 9 9 ]
Array sorted in descending order: [ 9 9 7 7 6 6 5 3 3 1 ]
After removing duplicate numbers : [ 1 3 5 6 7 9 ]
```
